

DRAFT- NOT FOR RELEASE

Galaxy Semiconductor Solutions and Jtron Technology Enter Distribution Agreement for Taiwan

Jtron to be Galaxy's Exclusive Authorized Sales and Support Agent for Device Characterization and Yield Management Software for the Taiwan Semiconductor Market

WALTHAM, Mass. and HSIN-CHU, Taiwan- January 21, 2009-- Galaxy Semiconductor Solutions, a major supplier of test data analysis and yield management software, and Jtron Technology, an ATE service provider and system integrator, today announced that they have entered into an exclusive distribution agreement for Taiwan. Under the terms of the contract, Jtron will offer sales and support for Galaxy's Examiner™ and Yield-Man™ software products to semiconductor companies and OSAT suppliers in Taiwan.

Examiner™ is a test data analysis solution that enables test and product engineers to perform device/program characterization and root-cause analysis from standard semiconductor data files such as STDF. With just a single click Examiner generates comprehensive reports, such as: yield summary, Cp, Cpk, histograms, wafer maps, Pareto diagrams, and gage R/R. In addition, Examiner performs automatic guard-banding of test limits, and lets engineers perform "what-if" experiments to explore the impact of test program changes on yield and repeatability.

Yield-Man is a comprehensive yield management solution that helps fabless companies, IDMs and test subcontractors automate the management of production test data with yield monitoring, enterprise report generation, and email alerting. With Yield-Man, product engineers can manage by exception and provide each stakeholder in the company with yield reports at the appropriate level of detail.

"We are very pleased to have Jtron as our sales partner for Taiwan," said Bertrand Renaud, COO of Galaxy Semiconductor. "Jtron's intimate knowledge of the semiconductor test market and long standing customer relationships will help us introduce the Galaxy product line to a wide audience of semiconductor companies, OSAT suppliers and silicon foundries, and help us accelerate our growth in the region."

"Jtron is evolving from a service company to a solution provider for our customers, and the Galaxy product line is now a strategic part of our offering" said Yimin Lin, President and CEO of Jtron. "We look forward to a long, productive relationship with Galaxy as we jointly grow our business in Asia."

About Jtron Technology Corp.

Founded in May, 2004, Jtron is Agilent's and Verigy's service partner for Semiconductor and LCD test equipment. Jtron also provides professional RFID system integration services for IC test facilities. The company has service locations across Asia, including Taiwan, Shanghai, Singapore, Malaysia, Thailand, and Korea.

About Galaxy

Galaxy Semiconductor Solutions is a leading provider of test data analysis, yield management and PAT software for the semiconductor industry. Over 1500 users worldwide rely on Galaxy products to help increase device yields, reduce defects and improve engineering productivity. Galaxy software is easy to learn and use, and offers a very short time-to-benefit, coupled with a compelling return on investment. More information about Galaxy can be found at
